ESM Strategy

# Enhanced Status Statistics Modules

New to ESM+Strategy is the ability to drill into a statistics module, as well as configure a status exception module which will dynamically update as elements are given the statuses you specify.

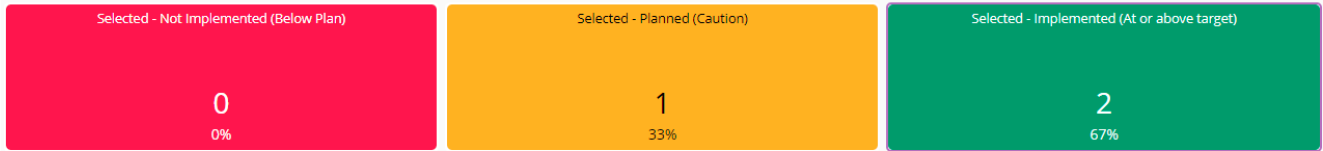

- Click on one of the status indicators available on your status statistics chart to show a list of elements that meet your charts criteria.
- When configuring your status statistics chart, choose "Status Exception" under the "Type of List" option, to configure a status statistics module that will only show the statuses you choose. As elements gain or lose status indicators, the exception module will update automatically.

Status Statistics

Q1'21 | 1. OTM Corporate | 3 of 5 filtered items

# Enhanced Dashboard Sharing

Now in ESM+Strategy, users are given more freedom than ever when sharing dashboards. Admins can make shared dashboards the Scorecard or Organizational default so that all users log directly into the default dashboard for ease of use.

- Users can now make a shared dashboard their own personal default dashboard.
- Organizations can choose how many users a dashboard can be shared with before reaching an admin check, which would require an admin’s approval for the sharing to be completed.
