

Release Notes

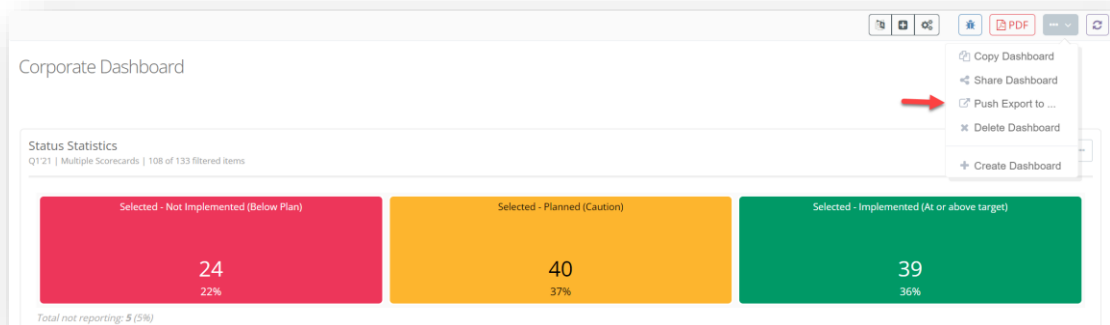

ESM Strategy

Push Dashboards to External Systems

- New to ESM+Strategy is the ability to send dashboards to an FTP or FTPS site, your organization's SharePoint instance, or any external website that can accept an HTML Post

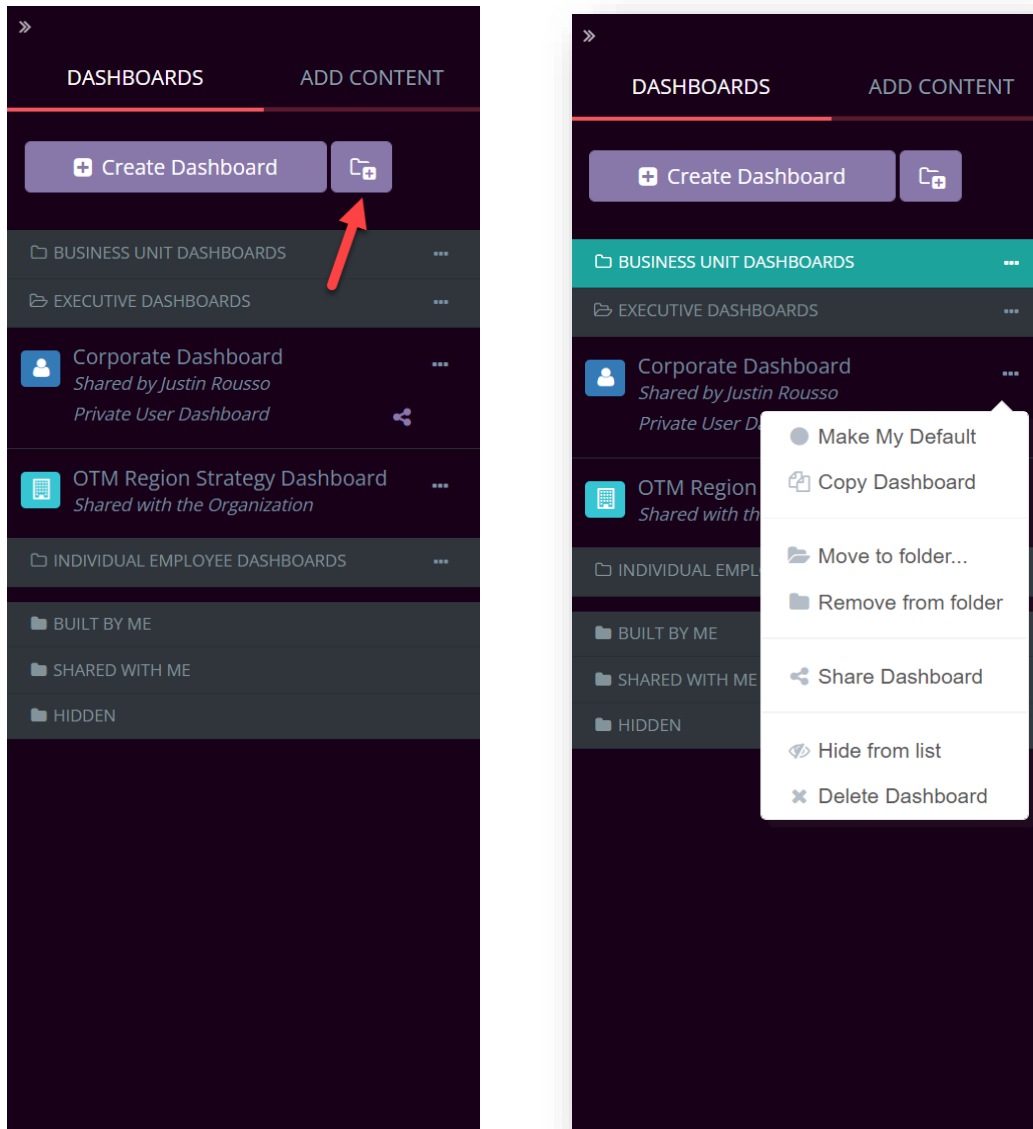

- Under Strategy Admin > Data Management > External Connections, you can add the information needed for ESM to securely connect to your FTP site, SharePoint instance, or HTML site
- Once your External Connections are configured, you can push your dashboard to your external site by clicking on the ellipsis in the top right-hand corner of the dashboard and selecting "Push Export to..."

- We plan on expanding the types of connections and features which will allow you to view information from ESM in your organization's systems

Dashboard Folders

- Now in ESM+Strategy users can organize their Dashboards via Folders

- We have added an add folder icon to the dashboards menu to add a new folder quickly and easily
- Clicking on the ellipsis next to a dashboard's name will show two new options:
 1. Move to Folder
 2. Remove From Folder
